

QA Tester (Fintech Platforms) – Job Description

About Capitalflow

Specialist Business Lender Capitalflow, began operation in April 2016 and has grown to become one of [Ireland's leading Specialist Business Lender](#). Capitalflow provides SMEs immediate access to a range of finance products – leasing, hire purchase, re-finance, invoice discounting and property finance. The company operates nationwide with offices in Santry and Baggot Street in Dublin. Capitalflow was a finalist in the 2021 [Deloitte Finance Services Innovations awards](#) and has ambitious growth plans, with a key focus on growing value for our customers through the delivery of an expanding range of products and services, supported by best in industry digital technologies.

About the role

Capitalflow has invested heavily in digitalising the business over the last year and is looking for a QA Tester to join our Digital Team. The candidate ideally has experience in testing customer facing digital journeys perhaps in a financial services environment.

Working remotely and from Dublin you will be part of a collaborative team from different backgrounds who has a passion for building successful robust products and systems. As a part of our agile team, you will be responsible for the testing side of our products.

Responsibilities

You will maintain and improve a well-designed QA process which is aligned with QA best practices. You will take part in the full development cycle (spring planning, daily scrums, retrospectives) all the way from development to release. You will be responsible for the development of a Test Strategy that will ensure high test coverage and quality.

You will be responsible for ensuring that testing happens in a correct and timely manner to allow for fast and safe releases and also ensuring "No code goes untested".

You will get involved in working within a cross-function development team following agile software development methodologies, identifying product defects, logging them, verifying fixes, tracking progress, reporting results, forecasting areas of risk and providing mitigation plans.

The requirements for this role

A BSc or MSC in computer science engineering, or related field with at least 2 yrs experience. Experience with Python, behave (or similar) and cucumber, or other BDD testing frameworks.

Experience using Jira and Confluence, Selenium to test UIs, specifically single page applications. Experience in manual and automated testing of web applications and REST APIs. Have knowledge of CI.CD, ability to use Git, and containerisation technologies like Docker.

If you would like to join this exciting and growing team, Please contact Maureen Kirwan HR Manager – mkirwan@capitalflow.ie **Closing date 30 July 2021**
